

Web of Conferences

FOR ALL EVENTS IN ALL SCIENTIFIC FIELDS
The Web of Conferences offers a complete conference proceedings publishing service

OUR SOLUTIONS

With its recognised expertise in the field of handling scientific information, the Conference Department of EDP Sciences offers a complete range of editorial services for the publication and distribution of conference proceedings.

All our services are modular, and can cover the following areas:

- Receiving and processing print-ready documents,
- Supervision of production by an editorial secretary who checks the manuscript, monitors the job and provides co-ordination between the various persons involved,
- Creation of a quality layout and print-ready files compatible with e-publication,
- Creation and hosting of websites for the publication of conference proceedings,
- Book, CD-ROM, DVD or USB key publishing options.

Our offer is flexible and modular. We can therefore offer solutions suited to any conference, whatever the number of participants, the type of document supplied, and the level of quality required.

ADVANTAGES

We aim to improve services to organisers and authors whilst increasing the visibility and raising the profile of the event, as well as to highlight the work of the participants and make the contents durable:

VISIBILITY AND PROFILE

Every conference has a dedicated website for the event, with its own URL and all the functionality of the EDP Sciences websites.

The conference sites we host benefit from the synergy created by our **Web of Conferences** portal, which includes all conference proceedings published by EDP Sciences and a calendar of conferences in the fields of science and technology.

Web of Conferences has a very high index at Google and Google Scholar, and therefore the websites and articles we host are found easily by general search engines.

We also have solutions to publicise and promote your events: an international calendar of conferences in every field of science, and advertising inserts in the EDP Sciences journals and websites.

HIGHLIGHTING RESEARCH

There is free access to all documents. (On request, we can also set up fee-paying solutions and restricted access.)

All documents hosted have a DOI (Digital Object Identifier, an alphanumeric code to identify intellectual property objects on the Internet) and are indexed in the DOI Foundation and in CrossRef. Articles are therefore fully identifiable and citable.

We also offer the capability of creating series by placing all the proceedings of a learned society, research center or scientific association on a single website.

LONGEVITY

All conference websites are hosted for an unlimited time (unlimited bandwidth and disk space).

We maintain and update all the sites we host. We also provide access to detailed statistical analyses concerning the visitors

We can take your paper archives and publish their contents online.
